

PRESS RELEASE

NEOPOST'S ADVANCED DS-100, DS-140, and DS-1000 FOLDER INSERTERS FOR INCREASED MAILROOM PRODUCTIVITY AND SECURITY

Provides Superior Speed and Increased Flexibility

Neopost, the worldwide provider of mailing and shipping solutions, introduces its new, high-volume DS-100, DS-140, and DS-1000 folder inserters. Ideal for organizations with high postal volumes, the DS-100, DS-140, and DS-1000 maintain an extremely high practical input, throughput, and output speed thanks to its design optimizing elements.

Operational Efficiency ensures maximum uptime and business continuity

These new highly modular tabletop folder inserters target customers with applications requiring maximum productivity and flexibility. The DS-100, DS-140, and DS-1000 's high collation and constant document speed combined with its parallel inserts and document folding handling, ensures high productivity throughput rate regardless of the number of documents being inserted. The automatic feeder and folder adjustment provides for very rapid changeover between jobs with different settings minimizing unproductive downtime. In addition, the high capacity output conveyor provides for unattended operation and easy further handling.

Unlike the DS-100 and DS-1000, the DS-140/PS-140 boasts a PC driven user interface allowing extensive application programming and control of all aspects of the machine as well as greater access to production data and reports. This includes a complete realtime status of running applications and allows the operator to access detailed statistics and data logging facilities to validate that every document has been correctly processed. Furthermore, The DS-140 offers greater modularity therefore supporting an even greater monthly production volume when compared to the DS-100 and DS-1000.

Optimized mail flow and best postal rates to save businesses money

The DS -100, DS-140, and DS-1000 reduce mailing operation costs by supporting the new market needs induced by USPS SBP rate case. This is achieved through allowing up to eight sheets to be folded in an envelope and allowing inserts of varying thickness to be added to each document. The integrated Output Management Software automates document printing, document sorting and grouping while the OMR and Barcode automation reduces mailing production hard cost as well as labor costs.
