

ASX™ Series

The Neopost ASX™ series is an advanced Windows®-based, multiple carrier manifest shipping automation software. This system is designed to automate and manage your shipping operation. With just one keystroke ASX™ software can: electronically verify a parcel's weight, identify the best method of shipment, calculate the actual shipping charges, generate a carrier package identification number, print the carrier compliant shipping label, transmit the package detail information electronically to the carrier, archive the manifest information into a permanent database for retrieval.

The software includes standard rates and services for air express carriers such as FedEx®, UPS®, Emery Worldwide, Airborne Express, DHL and the U.S. Postal Service. LTL tariff rates as well as local courier services may be added for a complete rate shopping solution. Now you have the power to control every aspect of your shipping process — labeling, carrier compliance, tracking, cost optimization and coordination of intermodal deliveries worldwide.

ASX™ software supports shipping station integration to all enterprise-wide information management systems. The programming of complex business rules logic within the ASX carrier service selection process provides for maximum delivery service while minimizing shipping costs.

Features

- Windows® based
- Multi-carrier
- Flexible software which support on going needs of the shipping industry
- Single key functionality
- Intuitive easy to read menu screens
- Over 200 management reporting options
- A variety of hardware and peripheral add-on options

Integration

Methods

Using our WinLink™2000 proprietary communication software Neopost ASX™ supports various methods of seamlessly exchanging data with host business systems (OMS, WMS, ERP, etc.) including:

- ODBC
- Screen Scraping/Mapping
- Batch File Processing (BFP)
- Order Data Processing (ODP)
- Dynamic Data Exchange (DDE)
- TCP/IP Sockets
- Barcode Templating (1D or 2D).

Mail Accounting

Neopost ASX® Systems may be interfaced to Neopost Electronic Postage Meters. Managers can now access total mailroom shipping and mailing costs for chargebacks to cost centers or department budgets.
